

ACS presents: 'Effects of multiple deployments on children -- and how to build resilient kids'

Neuropsychologist Dr. Grisalono to address Multiple Deployments and Effects on Children

Lee Ann Grisolano, Ph.D., is a Developmental Neuropsychologist, with the Grisolano Center for Neurodevelopment.

On Wednesday evening, October 16 from 6:30 to 7:30 p.m., she will meet with interested parents and all community members to discuss children's emotional, cognitive and behavioral considerations with attention to the effects of multiple deployments.

The information session will be at the Army Community Service Classroom/Education Center, 632 Wright Avenue on post.

"I don't think we, as military parents, fully understand the effects of multiple deployments on our military children, said Army Community Service's Kelly Villalobos, sponsoring the program.

Villalobos is the manager of the Exceptional Family Member Program and the Family Advocacy Program, and invited Dr. Lee Grisolano to share her expertise about child behavior, the psychological and physiological effects of multiple deployments on children, and how to aid in developing children's resiliency.

"We may be seeing children who are thought to be attention deficit-hyperactivity disorder when they may, instead, actually have anxiety related to multiple deployments," said Villabos.

There is no cost associated to attend.
