

Robotics Day April 28

Army to showcase high-tech robotics

Robotics demonstrations and displays, featuring military robots that replace Soldiers for high-risk battlefield tasks, will take place Wednesday, Apr. 28, 9 a.m. to 3 p.m. on Carlisle Barracks Indian Field. Inclement weather site will be the Root Hall Gym.

The intent of Robotics Day is designed to increase USAWC student awareness, and that of the surrounding community of the recent advances in robotics systems, especially those being fielded for use in ongoing operations, as well as those in research and development at various research laboratories, battle labs, and warfare centers.

Participating will be 19 vendors and agencies bringing to Carlisle an assortment of air and ground robots, autonomous (independently operating) robotics systems, robotic exoskeleton, and miscellaneous robotic devices.

Students from area high schools, home school associations, first responders, colleges, JROTC, ROTC, USAWC alumni, local military installations, and Carlisle-area residents, are invited to participate and learn about these examples of applied science and technology.

Individuals who do not have a Department of Defense decal on their vehicle will enter Carlisle Barracks through the Claremont Road Vehicle Access Center. All visitors must show a driver's license, vehicle registration and proof of insurance. Due to construction at the Claremont Road Vehicle Access Center, signage will lead drivers to a temporary road to access Carlisle Barracks, Marshall Ridge Housing and the Golf Course.
