The Landpower App is an at-your-fingertips reference guide for
busy national security professionals – linking users via any smart
phone or mobile device to a menu of current articles and research
papers relevant to the global application of Landpower.

The app introduces the user to many voices and varied concepts of
Landpower as a necessary element of national security. Careful
consideration of competing concepts is important: people live on

land, governments legislate from land and, ultimately the will of others is engaged and changed on land. The discussion of Landpower – facilitated by the Landpower App – is critical to the future success of our military and the security of the United States of America.
